DocOrigin

Release 3.1

Migration from legacy document generation systems

Today, almost every company, large or small, turns to Customer Communications Management in order to improve the delivery, storage and retrieval of the business communication with their clients, partners and employees. What most of the companies don’t know is that these processes can be digital, cost-effective, easy to use, fast and offer omnichannel document delivery without using multiple software solutions.

INTRODUCTION

DocOrigin has been developed by the same people who were instrumental in the creation of the Adobe/JetForm Central products. We know, perhaps better than anyone else, the complexities of that product. Our history and expertise has resulted in a comprehensive set of migration tools and strategies aimed at providing replacement technology for your implementation.
SOLUTION DESCRIPTION

DocOrigin (from the creators of Adobe Central Pro Output Server, Jetform) is an innovative and reliable solution for creating, managing, editing and delivering professional business communication in any format across multiple communication channels. With 4000+ installations worldwide, DocOrigin proves its reliability, flexibility, security and power, delivering needed documents to the needed addresses faster than any other solution with no outage in the past 5 years at any existing customer.

CONVERT FORMS IN SECONDS

DocOrigin can open Adobe Designer® XDP files and Adobe/JetForm® IFD files directly and save them as DocOrigin XATW template files. Most single-page and multi-page static forms migrate with 90 to 100 percent accuracy. Per form conversion time is just seconds. Although complex multi-page dynamic forms may require cleanup, the migration and conversion tools provided for your JetForm or Adobe Central forms and data should reduce your design and QA time by up to 70 percent. Touch-up of the automated conversion results may be required and will vary based on the complexity of the original form. The effort required may range from a few minutes to a few hours.

DATA FILES

Files in field-nominated format, .DAT, or .FNF are recognized by DocOrigin and automatically converted to well-formed XML that matches your template. Proper template and data merging is assured.
ONE FORM AT A TIME

One of the greatest challenges for many customers is the process of migrating from “old” to “new”. We can help you manage that change. Our representatives can show you how to migrate to DocOrigin on a template-by-template basis. You can have your current system and DocOrigin both running productively, and once all your templates are migrated, you can “pull the plug” on the old system. You can expect a smooth transition, with little or no disruption to your critical document generation processes.

CONVERSION DUE DILIGENCE

It is typical to undertake a due diligence process when contemplating migration from one product to another, especially when proprietary assets are involved, as they are with Adobe/Accelio/JetForm products. The due diligence process ensures that both the customer and the new vendor are cognizant of the restrictions and risks in the use or handling of proprietary assets.

The Ecodoctx team of experts can assist you in navigating through the due diligence process, and in organizing, managing and conducting your migration effort.
SUMMARY

- DocOrigin generates personalized, professional, dynamic, high-fidelity business documents
- Is as robust and dependable, as other market leaders, yet faster, easier more flexible and much more efficient
- Can be installed into any ecosystem, platform and can deliver any document type through any delivery channel.
- Builds a perfect solution for middle and enterprise-sized companies who’s data is generated by older legacy systems, such as Jetform, Adobe Central Pro, Create!Form, DocPath, Bottomline, FormScape, Optio, PDF Wizard

SOME OF THE HAPPY CUSTOMERS
